

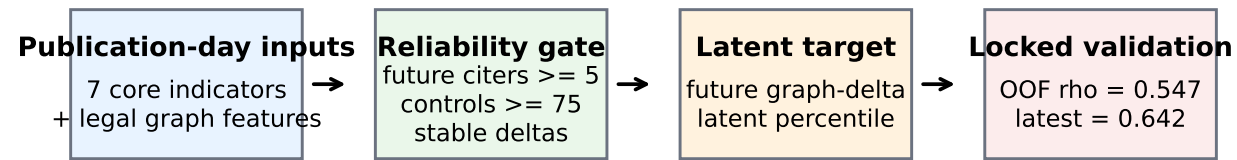

Fig. 3 v6A | Publication-day graph signatures predict latent future perturbation

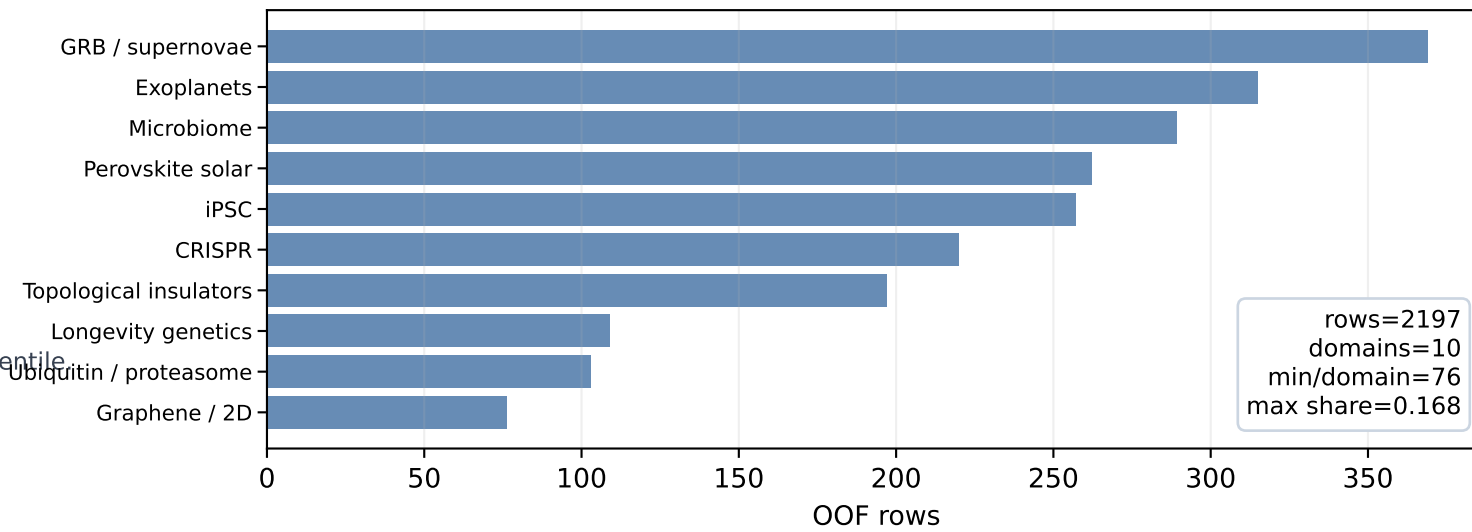

Locked moderate reliability cohort; seven core indicators plus legal publication-day graph features; no future features used as inputs.

a Locked v6A main-result policy

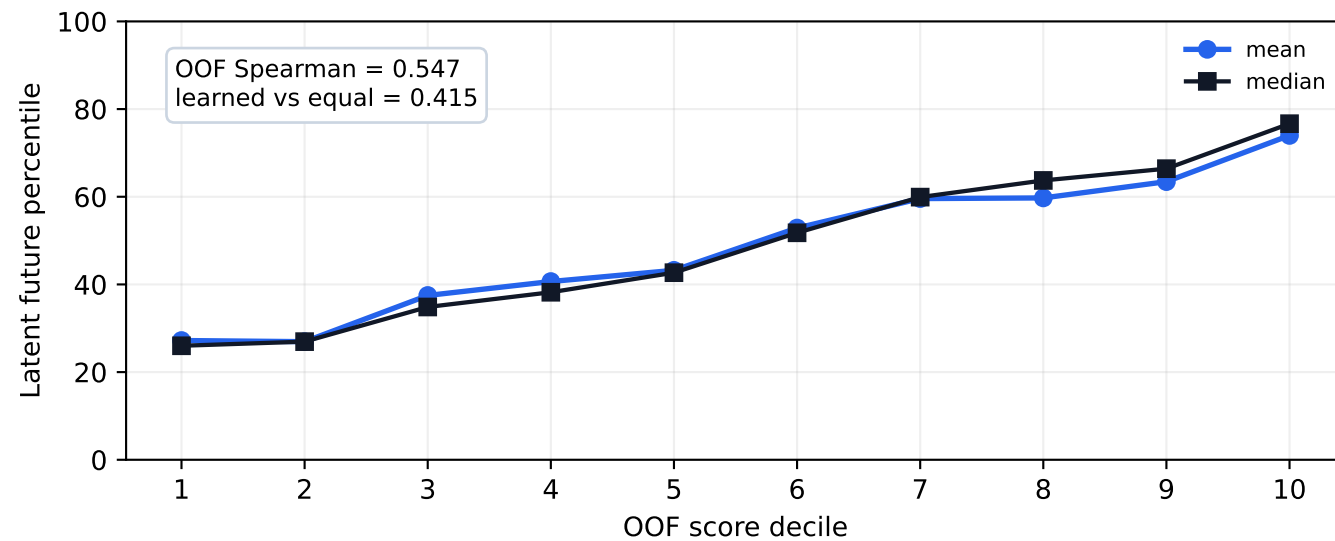

Main claim: publication-day graph structure predicts a reliability-gated latent future graph-perturbation percentile

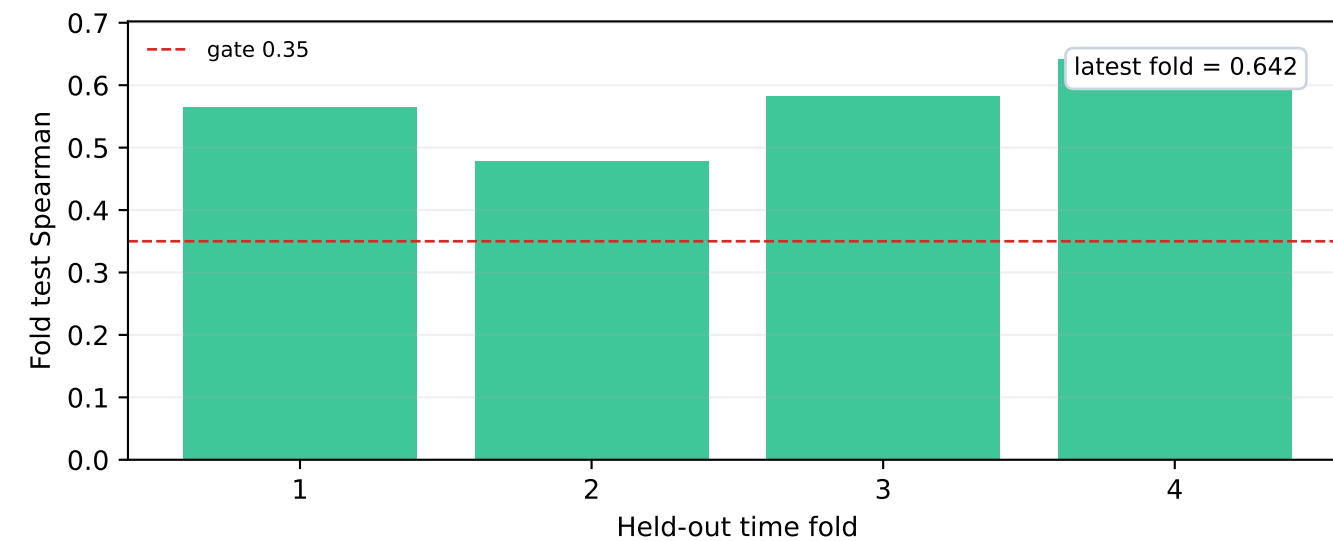

b Reliability-gated 10-domain cohort

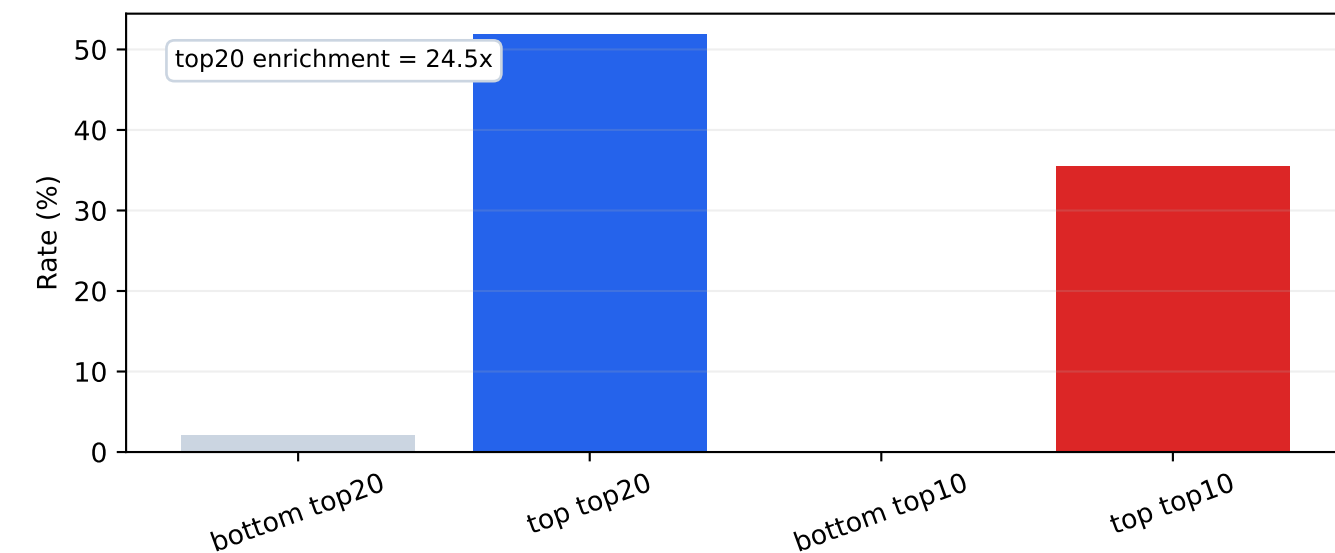

c Out-of-fold score separates latent future perturbation

d Time-block validation remains stable

e Top-tail enrichment

f Locked policy replicates across validation corpora
